

Compare Domain Validated SSL Certificates

There are many choices for SSL. Domain validated certificates provide basic encryption. These certificates are usually the least expensive, are issued very quickly, and do not include authentication of the business identity behind the web site. They only verify the person responsible for the domain and, for this reason, many consider them to be less secure. However, domain validated certificates still provide solid, reliable SSL encryption.

Give your customers more security and confidence with the SSL chosen by more high traffic web sites than any other.* Only GeoTrust offers the certificate you want at a price you like from a trusted security partner that makes your convenience our priority.
